Workflow

Tutorial to set up local repository

- <https://medium.com/@munniomer/an-intro-to-git-and-github-for-beginners-part-i-tutorial-9be4be9cac8d>

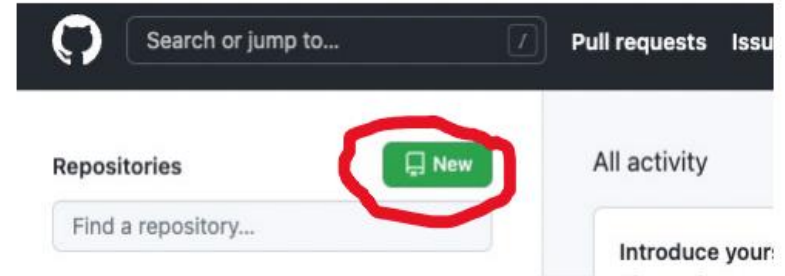

<https://rb.gy/wdvzo>

Set up

- Download and install Git
 - Creating a local git repository
 - Adding a new file
 - Create a commit
- **Create a free GitHub.com account**

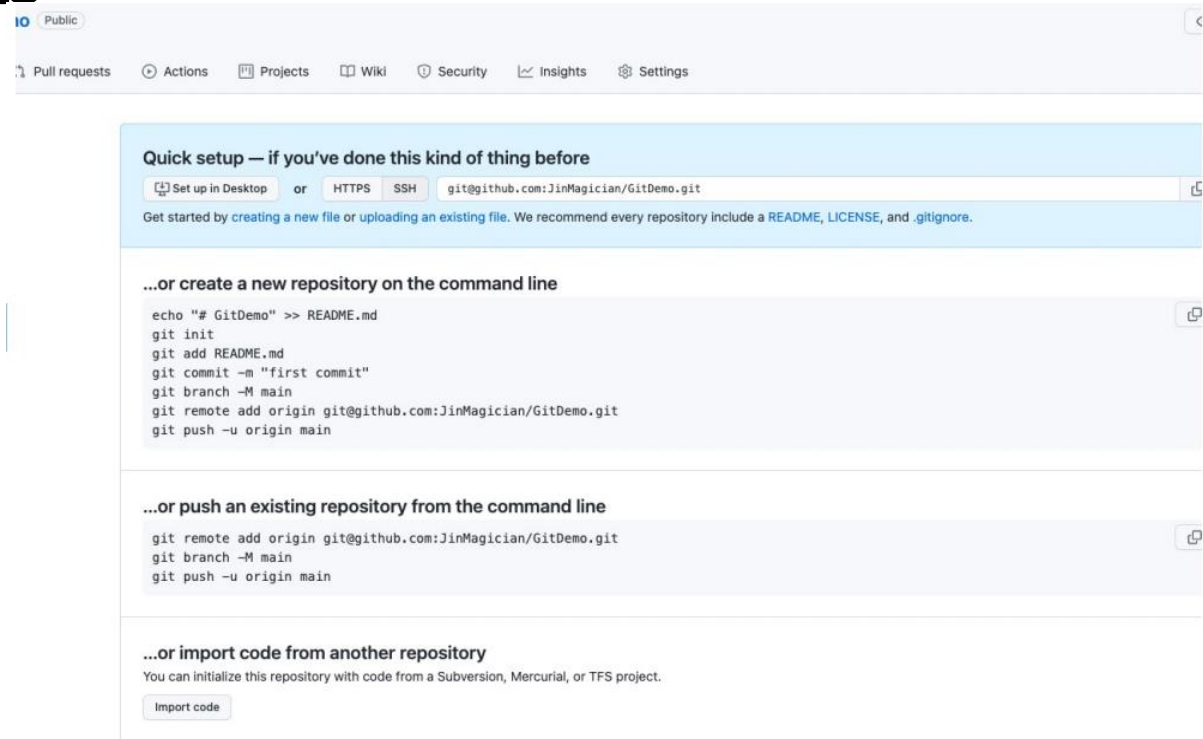

Set up GitHub

- Create a GitHub account if you haven't got one.
- Log into your GitHub account.
- Create a new repo with:
 - Repository name: GitDemo

Set up GitHub

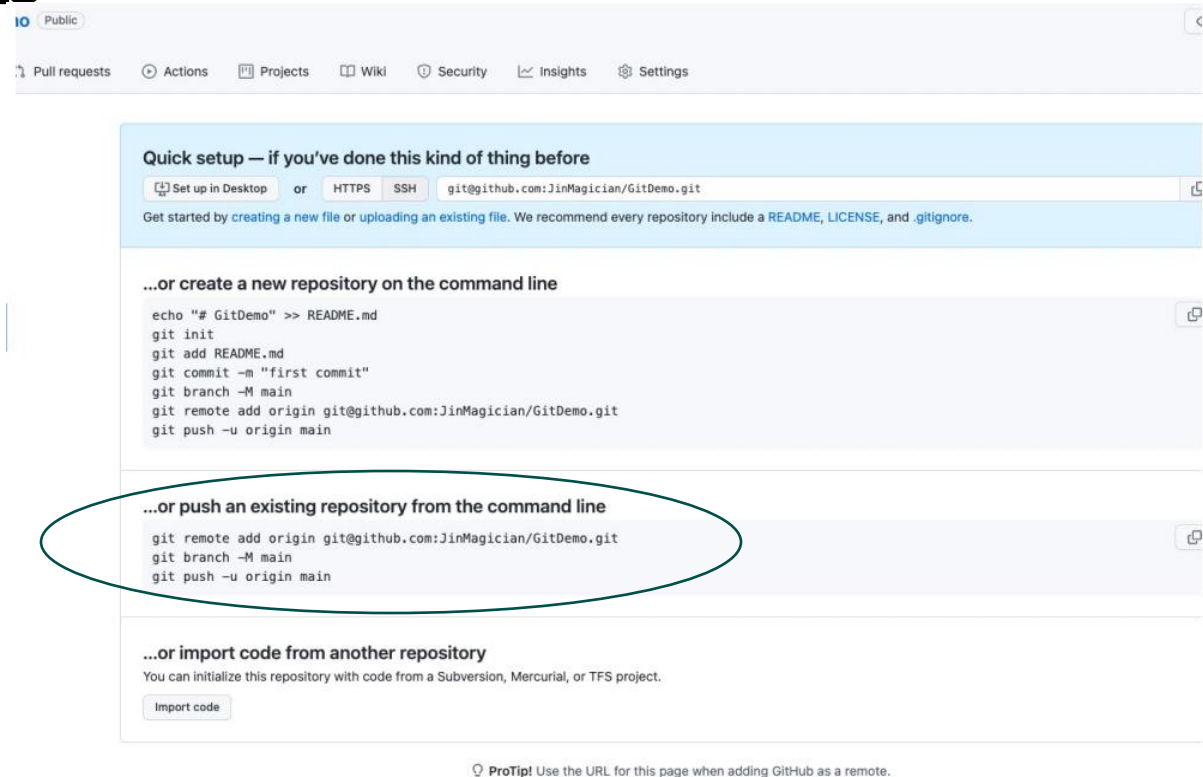

- You will see this page after creating your project.

ProTip! Use the URL for this page when adding GitHub as a remote.

Set up GitHub

- You will see this page after creating your project.

Push changes to GitHub

- In your SSH Terminal Window:
 - push your local repo to remote repo
git push origin master
 - type yes if you get the following

```
The authenticity of host 'github.com (140.82.113.4)' can't be established.  
ECDSA key fingerprint is SHA256:p2QAMXNIC1TJYWeIOttrVc98/R1BUFWu3/LiyKgUfQM.  
Are you sure you want to continue connecting (yes/no)? yes
```

-- You will see this error message

```
git@github.com: Permission denied (publickey).  
fatal: Could not read from remote repository.
```

Please make sure you have the correct access rights
and the repository exists.

Question: How to connect to the remote repo? Hint: Authentication

- [Set up SSH!](#)

<https://rb.gy/swp1e>

Push changes to GitHub

- In your SSH Terminal Window:

- generate ssh key pairs

- ssh-keygen -t rsa (and press enter 4 times)*

```
~/app (master) $ ssh-keygen -t rsa
Generating public/private rsa key pair.
Enter file in which to save the key (/home/ubuntu/.ssh/id_rsa):
Enter passphrase (empty for no passphrase):
Enter same passphrase again:
Your identification has been saved in /home/ubuntu/.ssh/id_rsa.
Your public key has been saved in /home/ubuntu/.ssh/id_rsa.pub.
The key fingerprint is:
SHA256:pz7onIF0hRpwzoSCWto0VDvizvS1RbiVzN2LKwgmavo ubuntu@ip-172-31-83-223
The key's randomart image is:
```

- print public key*

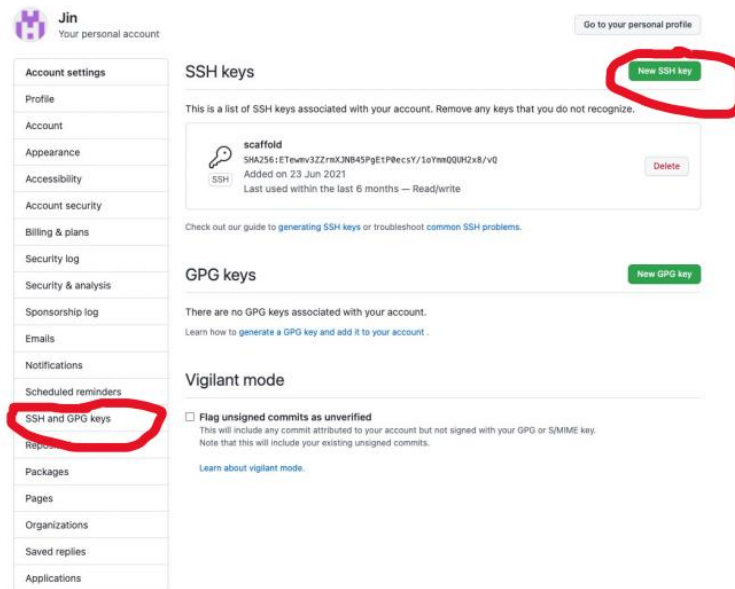

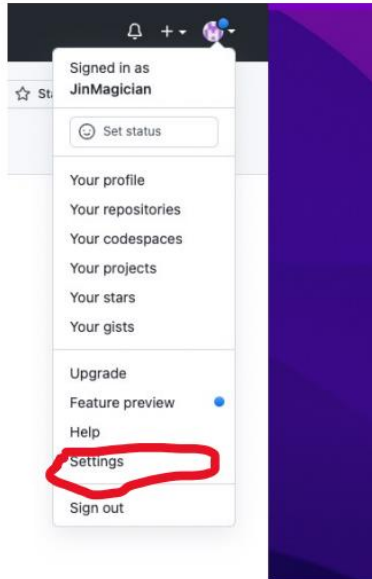

- cat /home/ubuntu/.ssh/id_rsa.pub*

- copy your key*

```
~/app (master) $ cat /home/ubuntu/.ssh/id_rsa.pub
ssh-rsa AAAAB3NzaC1yc2EAAAADAQABAAQCA...
9LXW3ePiR12EEPzKFmyVULV6rNDltfr+tdn6z1LaLdEQj6dtn7GUVfMYBMURJh0Jfg5tfAVpIagpOY+

3gBMbCMT/m2bf18/DtobUXqUzouy...
223
~/app (master) $
```

Push changes to GitHub

- In your GitHub account, click Settings, then click SSH and GPG keys, New SSH key

Push changes to GitHub

- In your GitHub account, create New SSH key with

Title: github-demo

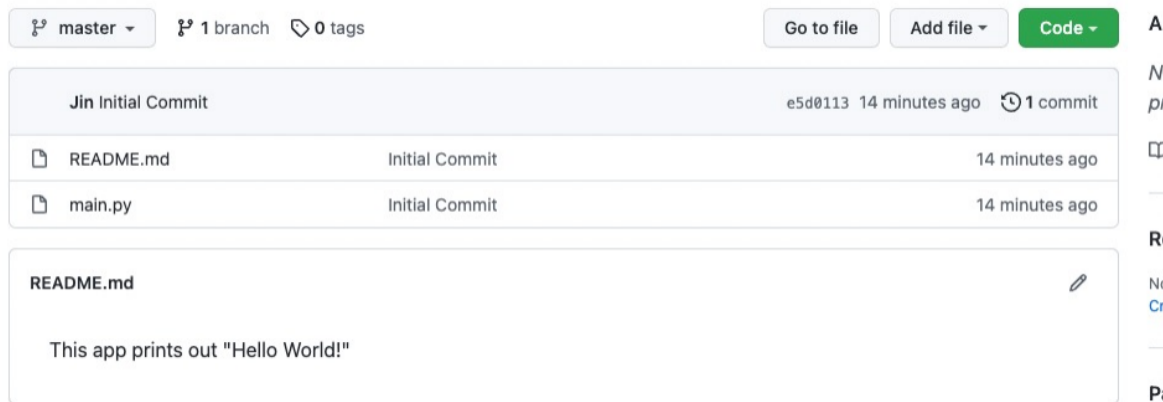

Key: the key you just copied

- Add SSH key

```
~/app (master) $ cat /home/ubuntu/.ssh/id_rsa.pub  
ssh-rsa AAAAB3NzaC1yc2EAAAADAQABAAQDAQFvCZlWw3TQ33611nKwprgmm1Vps610EKzePjnj

-223  
~/app (master) $
```

Push changes to GitHub

- In your SSH Terminal Window:
 - push your local repo to remote repo
git push origin master
- Check the repo in you GitHub account.

The screenshot shows a GitHub repository interface. At the top, there's a navigation bar with 'master' selected, '1 branch', and '0 tags'. To the right are buttons for 'Go to file', 'Add file', and 'Code'. Below this, a commit summary shows 'Jin Initial Commit' with hash 'e5d0113', '14 minutes ago', and '1 commit'. A table lists the files added: 'README.md' and 'main.py', both marked as 'Initial Commit' and added '14 minutes ago'. Below the table, the content of 'README.md' is displayed, showing the text 'This app prints out "Hello World!"'. On the right side, a partial view of a file explorer shows folders 'A', 'N', 'pi', and files 'R', 'N', 'Cr', 'Pi'.

File	Commit	Time
README.md	Initial Commit	14 minutes ago
main.py	Initial Commit	14 minutes ago

README.md

This app prints out "Hello World!"
